

FLYING OUT OF WATER!

Flyboard®

Flyboard® is a machine that allows propulsion under water and in the air, connected to a personal watercraft. It is available in two versions: the first version is for two people: one on the jet propulsion that runs through the accelerator, the other one using the Flyboard®; the second version is for a single use and allows greater precision in the evolution and stability in flight. Its intuitive use will give you exceptional sensations. It requires a few minutes of exercise after which it will be easy to move underwater like a dolphin! Finding the right balance you will be able to make any kind of evolution. Ariaperta provides qualified instructors and all the equipment to test this fantastic emotion.
